

1. INTRODUCTION

Library Management System is an application which refers to library systems which are generally small or medium in size. It is used by librarian to manage the library record various transactions like issue of book, return of book, addition of new book, users, staffs. Book and user maintenance modules are also included in this system which would keep track of the users using the library and also a detailed description about the books a library contains....

1.1 OBJECTIVE OF THE PROJECT

A college Library Management System is a project that manages and stores book informations electronically according to users needs. The system helps both users and library manager to keep a constant track of all the books available in the library. It allows both the admin and users to search for the desired book. It keep a continuous check on books issued and returned and even calculate fine. It allow system to keep track of information such as issue date and due date and fine information.

Overall this project this project is being developed to keep users as well as staff of library to maintain the library in the best way possible and also reduce human effort.
